IBRAHIM KEITA

Cloud Operations · Systems & Infrastructure Support

Prince George's County, MD | 301-844-8645 | ibrahimkeita70@gmail.com
Portfolio: ArchitectKeita.github.io | GitHub: github.com/ArchitectKeita

SUMMARY

IT and systems support professional with nearly two years of enterprise experience in Active Directory, Microsoft 365, endpoint deployment, and escalated troubleshooting. Has built, tested, and documented six AWS projects, from a self-healing web tier to a working bank and a monitoring console that watches the rest, the latest three entirely in Terraform. Seeking cloud support, cloud operations, or junior cloud engineering roles.

TECHNICAL SKILLS

AWS	Lambda, DynamoDB (transactions, Streams), API Gateway, Cognito, S3, EC2, Auto Scaling, ALB, EBS, SNS, EventBridge Scheduler, CloudWatch (metrics, alarms, Logs), Bedrock, IAM least privilege, Multi-AZ
IaC & Tooling	Terraform, AWS CLI, Python (boto3), moto testing, Bash, Git/GitHub, Linux, cloud-init
Systems & Identity	Active Directory, Microsoft 365, Intune, Windows, user account and access management
Support	ServiceNow, ticket triage and escalation, imaging and deployment, remote support, VPN

AWS PROJECTS

code and write-ups: github.com/ArchitectKeita

Command Center · observability console for all projects — *Terraform · CloudWatch · Lambda · SNS*

- Sweeps six live systems every 15 minutes (traffic, errors, latency, health checks, missed schedules) and grades each nominal, degraded, down, or offline; 10 CloudWatch alarms email on any function error.
- Traced a first-deploy AccessDenied to IAM eventual consistency with the IAM policy simulator, and removed the race.

KeitaBank · demo bank with real guarantees — *Terraform · Cognito · API Gateway · DynamoDB*

- Sign-in, accounts, transfers, payments, and a live spending dashboard; money moves in single DynamoDB transactions with idempotency keys. 45 tests prove a repeated request moves money once and racing transfers never overdraw.

Job Search Tracker · logs itself from Gmail — *Terraform · Lambda · Bedrock · SNS*

- 32 resources in one Terraform apply; AI email parsing with a pattern-matching fallback that kept working when Bedrock throttled the model. In daily use.

Card Fraud Alerts · "Was this you?" — *Lambda · DynamoDB Streams · SNS*

- Real-time pipeline scoring card swipes against four fraud rules; the alert email's button locks the card; swipes are idempotent.

EBS Snapshot Automation · fail-safe cleanup — *Lambda · EventBridge · IAM*

- Nightly backups that can delete only their own snapshots, enforced in code and by an IAM tag condition; proved with decoys.

Self-Healing Web Tier · multi-AZ — *EC2 · Auto Scaling · ALB · S3*

- Terminated instances to prove replacement with no downtime; diagnosed a missing shebang that made cloud-init skip the boot script.

EXPERIENCE

Systems Technician · Kyndryl (Contract) — *Nov 2025 – Jul 2026*

- Resolved a high volume of support tickets on site for an enterprise client; imaged and deployed workstations organization-wide.

Business Development Specialist · Honey Leaf Platters — *Nov 2025 – Nov 2026*

- Sole business development function: built the prospect database, sales tracker, and pipeline dashboard; ran outreach across the DMV.

IT Administrator · OTT HydroMet (Contract) — *Jul 2025 – Oct 2025*

- Primary IT contact: remote support, VPN access, and user accounts and access in Active Directory and Microsoft 365.

IT Support Specialist II · Bloomberg Industry Group (Contract) — *Nov 2024 – Jul 2025*

- Resolved escalated issues beyond first-line support, partnering with engineering teams on complex systems problems.

Data Entry Specialist · Maryland-National Capital Park and Planning Commission — *Feb 2020 – Jul 2024*

- Maintained the accuracy of departmental records over 4.5 years, finding and correcting discrepancies.

EDUCATION & CERTIFICATION

AWS Certified Solutions Architect – Associate (SAA-C03) · in progress — *exam targeted Feb 2027*

Associate of Science, Aerospace Engineering · Montgomery College — *Nov 2025*
